

Data and do-files for Griffith, Harrison and Van Reenen “How special is the special relationship? Using the impact of US R&D spillovers on UK firms as a test of technology sourcing”

The necessary data for replication of the results in Tables 3 and 4 is contained in the Stata9 dataset “20040910\_data.dta”. The variable names and definitions are as listed in the table below. The Stata do files for replication of the results are contained in:

- (1) “20040910\_program.do” [for all main results]
- (2) “20040910\_op.do” [for Table 3 column (6)]. Note that this requires “20040910\_ops.do” to be installed in the same sub-directory

Results are contained in the corresponding Stata log files.

For details about the construction of the variables see the web Appendix.

For more details about the construction of the IFS-Leverhulme dataset, see
